

FORT TOTTEN MEETING REMINDER

The information below is taken from a letter that was received from the U.S. Army Corps of Engineers. It is supposedly a follow-up to the on going discussion concerning mercury and other harmful contaminants that may be present on Fort Totten.

Does anyone else remember when we were being told that the contaminants in the soil all tested within acceptable levels and required no remedial action?

They hate it when people actually show up for these meetings; let's do everything we can to make them unhappy.

-Warren Schreiber, President, Bay Terrace Community Alliance, Inc.

Subject: Public Meeting, June 11, 7:00 PM
Feasibility Study Results and Discussion of Remedial Alternatives

You are invited to a public meeting on Thursday, June 11, at 7:00 PM at the Bay Terrace Jewish Center, hosted by the U.S. Army Corps of Engineers, to discuss the results of a feasibility Study completed as part of the Ft. Totten Coast Guard Station Formerly Used Defense Sites (FUDS) project.

In addition to presenting the results of this Feasibility Study, the Corps will discuss the Remedial Alternative selected to address soil that may be of concern on the property. Four possible alternatives were reviewed, consistent with the FUDS re-mediation procedures.

Meeting Information

**Thursday, June 11, 7:00-8:30 PM
Bay Terrace Jewish Center
1300 209th Street
Bayside, NY 11360**
